01 / ADMINISTRATION

Priya Sharma

College administrative assistant

Background

Regularly prepares and updates student CSV records for admissions, enrolment and office reporting.

Goals

Keep student records accurate and ready to upload.
Finish routine checks before reporting deadlines.

Frustrations

Missing fields and duplicate student IDs.
Time spent finding errors one row at a time.

Needs

Clear error messages with row and column details.
A simple way to review issues and export clean data.

Technical proficiency

Basic to intermediate — comfortable with Excel and CSV files; prefers a guided, no-code workflow.

02 / FACULTY

Rahul Verma

Faculty member

Background

Checks attendance and academic data in CSV files before submitting class records to the college office.

Goals

Submit reliable attendance and marks data.
Catch incorrect values before final submission.

Frustrations

Inconsistent dates and mismatched student IDs.
Repeated manual checks across class records.

Needs

Checks for missing entries, formats and valid ranges.
A concise summary of issues to correct and recheck.

Technical proficiency

Intermediate — uses spreadsheets and basic formulas; prefers quick checks without complex setup.

DATAGUARD / USER JOURNEY MAP

Checking student records, with confidence

USER College administrative staff member

GOAL Identify and correct issues before records are used.

SCENARIO Reviewing a student-record CSV before reporting or import.

JOURNEY STAGES	01 Opening DataGuard	02 Uploading a CSV file	03 Running validation	04 Viewing the validation summary	05 Inspecting detailed errors	06 Correcting the CSV file
User action	Opens DataGuard to check a student-record CSV before using it.	Chooses the student-record CSV and uploads it for checking.	Starts validation and waits while DataGuard checks the records.	Reviews the overall result and counts of valid records and errors.	Reads error details and identifies affected rows and fields.	Edits the CSV in a spreadsheet, saves it, then uploads it again.
Thought	“Can I check these records without technical help?”	“Is this the right file, and is it in the right format?”	“Is it still working? How long will this take?”	“Is this file ready, or is there more work to do?”	“Which value is wrong, and what should it be?”	“Have I fixed everything without introducing new errors?”
Emotion	**Cautious** Unsure what to expect.	**Uncertain** Worried about the upload.	**Anxious** Waiting for feedback.	**More informed** Sees the scope of issues.	**Frustrated** Working through details.	**Hopeful** Ready to recheck the file.
Pain point	May not know the required CSV structure or where to begin.	Unclear file requirements can lead to a rejected upload.	Limited progress feedback makes the wait feel uncertain.	Totals alone may not show which issues need attention first.	Vague messages or unclear row references slow down diagnosis.	Switching between tools and repeated uploads adds effort.

KEY OPPORTUNITY

Make the next step clear: explain upload requirements, show validation progress, and give actionable row-level errors.
