DATAGUARD / COLLEGE MINI PROJECT

Prototype & usability testing

CSV data validation application

03 SCREENS / 04 INTERACTIONS

SECTION 1: CLICKABLE PROTOTYPE

Start with CSV Upload in Present mode. Teal buttons connect the screens below.

CSV Data Validation Made Simple

Upload a CSV file to check data quality and find errors before you use your data.

Upload your CSV file

Drag and drop your CSV file here

Browse Files

Supported file format: .csv

Selected file

student_records.csv

Validate CSV

Validation Summary

Uploaded file: student_records.csv

Total Records	Valid Records	Errors Found	Warnings Found
100	85	12	3

Validation complete

Your file has been validated. Some records need attention.

Review the detailed report to see the affected rows and suggested fixes.

View Detailed Report

Upload Another File

Validation Findings

Uploaded file: student_records.csv

Review the affected records and use the suggested fixes to update your CSV.

Rule	Row	Column	Error	Suggested Fix
Percentage	12	Marks	Invalid percentage value: 120	Enter a value between 0 and 100.
Date	18	Joining_Date	Incorrect date format	Use YYYY-MM-DD.
Email	25	Email	Invalid email address	Enter a valid email address.

Back to Summary

Navigation prototype • student_records.csv is preselected; file upload and validation are simulated.

SECTION 2: USABILITY TESTING

Testing Objective

To evaluate whether users can upload a CSV file, understand validation results and identify errors using DataGuard.

Target Users

College administrative staff and faculty members who work with CSV or spreadsheet data.

Evaluation Criteria

- Ease of navigation
- Clarity of instructions
- Understanding of validation results
- Ease of locating errors
- Usefulness of suggested fixes

Test Tasks

01 Open DataGuard and locate the CSV upload option.

02 Upload a sample CSV file.

03 Start the validation process.

04 Understand the validation summary.

05 Open detailed findings and identify how to correct an error.

Feedback Questions

01 Was uploading the CSV file straightforward?

02 Were the validation results easy to understand?

03 Could you identify the row and column containing an error?

04 Were the suggested fixes helpful?

05 What would you improve in the application?

Observation Table

Record feedback and improvements during actual testing.

Task	User Feedback	Improvement Needed
1. Locate CSV upload		
2. Upload a sample CSV		
3. Start validation		
4. Understand the summary		
5. Identify an error and its correction
